DETAILED ACTION

Double Patenting

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 1-3 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-3 of U.S. Patent No. 6,636,899 in view of HOLDEN (U.S. Patent 5,832,228). The cited patent teaches the overall program as defined in the claims of the patent except for wherein a subset of permissions restrict the computer to one of direct connection or network connection. HOLDEN teaches providing network security through a secure network interface unit coupled between the host or user computer unit as a protocol stack. The SNIU is implemented to provide a controlled communication release and a controlled communication flow and secure session protocols through each control unit interface (col. 3, lines 2-7). The user/service interface function of the SNIU performs a standard communications stack function by handling all the standard communications data translation between the layers (col. 3, lines 8-26 and col. 4, lines 50-65) wherein the

presentation layer controls the users display and the lower layers check to see if the user has permission (col. 7, lines 39-47). Therefore, it would be obvious in view of HOLDEN that since the presentation layer controls the users display and the secured lower layers control permission to access the network that the combination teaches displaying the controlled user access to the network. Therefore, it would be obvious to one skilled in the art to combine the teachings of Patent 6,636,899 with HOLDEN in order to facilitate the securely controlling the network.
